

Nix-Darwin

- **Like NixOS, but on Darwin.**
- Declaratively install applications, manage your Dotfiles and system settings.
- Installs Nix on your machine, and the nix-darwin utility that performs the system rebuilding
- Recommendation: Good to "get the feeling" of Nix on your native machine, but not enough on the long run.
- Many NixOS options are engineered for Linux.

Some Packages in nixpkgs are not packaged for Darwin.

homebrew.brews

List of Homebrew formulae to install.

Formulae defined as strings, e.g., "imagemagick", are a shorthand for:

```
{ name = "imagemagick"; }
```

Type: list of ((submodule) or string convertible to it)

Default: []

Example:

```
# Adapted examples from https://github.com/Homebrew/homebrew-bundle#usage
[
  # `brew install`
  "imagemagick"
```
